

Australian Government

CARBON POLLUTION
REDUCTION SCHEME:

Australia's Low Pollution Future

**WHITE PAPER
DECEMBER 2008**

Australian Government

The need to act

- Australia will be one of the first and hardest hit of developed countries
 - Key interest in effective global action
- Moving early to reduce carbon pollution costs less than delaying action, and smoothes the transition to a low pollution economy
- Australia joining other countries in reducing carbon pollution
 - Making real cuts while growing Australia's economy can encourage global efforts

Australian Government

Carbon Pollution Reduction Scheme: significant economic reform

- Process begun with NETT, previous Government's Task Group
- Green Paper set a platform for detailed engagement
- Extensive consultation with stakeholders all the way through
 - 1000 submissions plus extensive bilateral and roundtable meetings
- Government has heard from stakeholders and responded
- Now at decision point for significant economic reform process
 - need to settle difficult decisions and implementation detail

Australian Government

White Paper in overview

- Key policy decisions
 - Medium-term target and indicative trajectory
 - Household and business assistance measures
 - Carbon prices
 - Other elements of market design
- Builds on Green Paper framework
- Key changes
 - more extensive EITE assistance
 - more features to assist cost control

Australian Government

Responding to climate change in an uncertain economic environment

“We must not let the financial and economic crisis distract our attention from moving towards long-term rational climate policies.” –
OECD Secretary-General

Australian Government

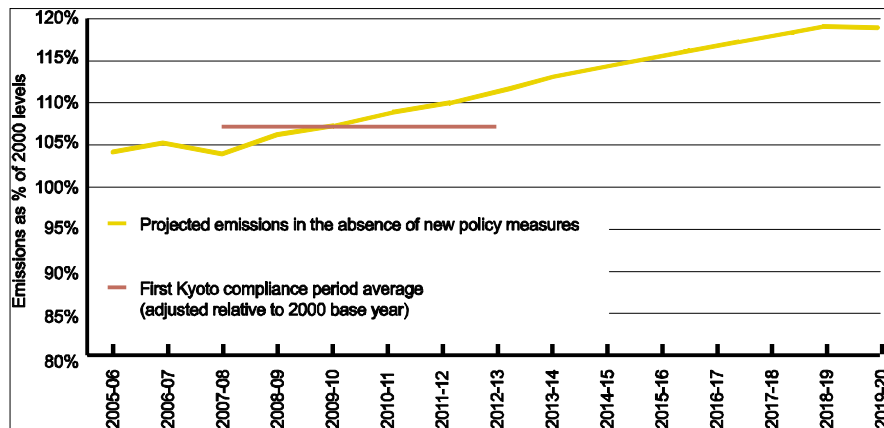

A substantial economic reform

- Largest reform since the opening of the economy in the 1980s
- For the first time cost of carbon pollution will be factored into all decisions in the economy
- Wide coverage ensures costs are low and impact is equitable
- Carbon cost provides incentives to invest in low emission technologies, and to innovate
- Every cent raised by Australian Government will be used to assist households and businesses

Australian Government

Significant momentum in Australian emissions

Australian Government

Medium term national target

- Serious and credible commitment to global action consistent with continued economic growth and improved living standards
 - Medium-term target of between 5% and 15% below 2000 levels by 2020
 - 5% unconditional
 - 15% if all major economies commit to substantially restrain emissions, and advanced economies take on reductions comparable to Australia

Australia to play full part in ambitious global action

- Fair and effective global action leading to emissions stabilising around 450ppm, or lower, in Australia's interests
- If a comprehensive agreement consistent with ambitious stabilisation goals emerges, Australia prepared to play its full role in achieving agreed goal
 - Will set targets beyond 2020 consistent with this
 - 2020 target range positions Australia well to make such a contribution
 - Committed to existing long-term target of a 60% reduction from 2000 levels by 2050
 - Government will consider changing its long term target if necessary to play its full role

Targets in comparison

- 5-15 range – a significant contribution
- Population growth of 45% between 1990 and 2020
- 5-15 in aggregate translates into 34 – 41% for each and every Australian

Country	2020 targets	2020 per capita reduction	2050 targets
Australia	5-15% below 2000 levels (4-14% below 1990 levels)	27-34% below 2000 levels (34-41% below 1990 levels)	60% below 2000 levels (60% below 1990 levels)
European Union	20-30% below 1990 levels	24-34% below 1990 levels	60-80% below 1990 levels
United Kingdom	26-32% below 1990 levels	33-39% below 1990 levels	80% below 1990 levels
Proposal			
United States (proposal of President-elect Obama)	Return to 1990 levels	25% below 1990 levels	80% below 1990 levels

Australian Government

Targets to reduce carbon pollution

Australian Government

Scheme Design

Australian Government

Permit allocation

- Mixture of auctioning and free allocation
 - large proportion of permits will be auctioned
 - auction designed to promote an efficient carbon market
- Government commitment:
 - Every cent raised by the scheme will be used to help households and business adjust to the scheme and invest in clean energy options
- Need to carefully balance the needs of different sectors

Australian Government

Auctions

- Monthly auctions
- Further consultation on deferred payment with strict parameters
 - Transitional only
 - No consideration of options involving delivery of permits prior to final payment, or no payment of a deposit

Caps and gateways

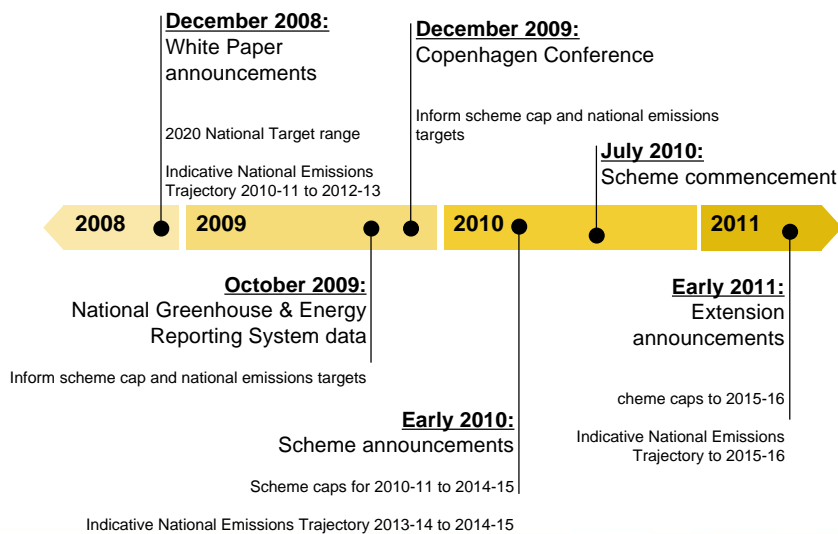

- Business will want guidance over scheme caps to inform investment

BUT

- The uncertain medium-term international negotiating environment requires flexibility
- Allowing imports reduces importance of domestic scheme caps for price
- Guidance:
 - 5 years of caps, extended annually
 - Up to 10 years of 'gateways', extended every 5 years

Caps set after Copenhagen

Australian Government

Design Features influencing carbon price

- Economically responsible trajectory
- Open approach to imports of credits, no exports in early years
- Price cap for five years set at \$40, rising at 5% per annum after inflation
- Flexibility to use permits over time
- Regulatory oversight from ASIC, existing TPA provisions

Australian Government

Scheme coverage

- Around 75% national emissions
- Around 1000 firms with mandatory obligations
 - Large direct emitters (>25kt)
 - Upstream fuel suppliers to small emitters
 - All liquid fuel upstream
- Some entities will volunteer to take on scheme obligations
 - forest entities
 - some fuel users
- Transition for legacy waste
- Proposed 'obligation transfer number' system for netting out of upstream and downstream emissions

Australian Government

Governance

- Creation of Australian Climate Change Regulatory Authority
 - Incorporating other climate regulators over time
- Make independent decisions based on rules set in legislation
- Independent expert advisory committee to conduct strategic reviews of the scheme every five years

Australian Government

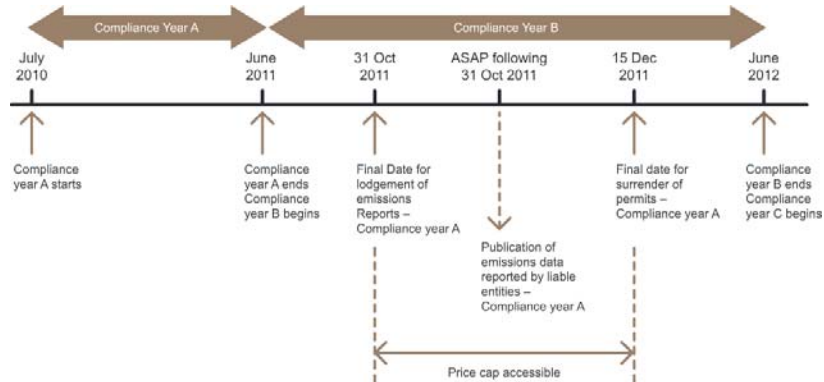

Reporting and compliance

- National Greenhouse and Energy Reporting System (NGERS) the foundation
- Emissions Reporting System (OSCAR) – single report for both schemes
- Options to transfer obligations
- Voluntary surrender of permits leads to Kyoto unit cancellation

Australian Government

Compliance timeline

Australian Government

Next steps

- White Paper to form the foundation of Australia's ongoing response to climate change
- Exposure draft legislation to be released early 2009
- Introduction to Parliament in May 2009
- Climate change action fund will be rolled out before scheme commencement
- Following successful passage of the legislation, the scheme is expected to start on 1 July 2010

Australian Government

Household and Business Assistance

“there is no cost-free way to transition to the low pollution economy of the future” The Hon Prime Minister Kevin Rudd

Australian Government

Household impacts

- Assumed starting price of \$25 will increase:
 - overall cost of living by 1.1 per cent
 - weekly electricity bills by \$4
 - weekly gas and other fuel bills by \$2
- Overall package approximately \$6 billion per annum

Australian Government

Household package

- Pensioners, seniors, carers and other low-income households will receive additional support, above indexation, to fully meet the expected overall cost of living flowing from the scheme.
 - Around 90 per cent of low-income households (or 2.9 million households) will receive assistance equal to 120 per cent or more of their cost of living increase.
- Middle-income households will also receive support
 - Around 97 per cent of middle income households will receive some direct cash assistance.
 - Middle-income families receiving Family Tax Benefit Part A will receive assistance to meet at least half of the cost of living impacts.

Australian Government

Fuel tax offset

- Fuel tax to be reduced on a cent for cent basis
 - Cut in fuel tax based on diesel emission factor
 - Six monthly adjustments for three years
 - CPRS fuel credit for 3 years for agriculture and fishing industries
 - CPRS fuel credit for one year for heavy on-road transport
 - Equivalent treatment of LPG, CNG, LNG

Australian Government

Emissions-intensive, trade-exposed (EITE) industries

- Assistance provided because:
 - risk of carbon leakage from lack of comparable carbon constraints
 - need for transitional assistance
- Assistance to EITE industries will:
 - balance support for EITE firms with other community interests
 - maintain strong incentives for EITE firms to reduce emissions and contribute to Australia's emissions reduction efforts

Australian Government

Eligibility for EITE assistance

- Assessment based on all entities conducting an activity
 - Emissions intensity test (revenue and value added)
 - Emissions data: 2006-07 and 2007-08
- Revenue/value added data: 2004-05 to first half of 2008-09
- Trade exposure test (trade share and potential for international competition)
- Emissions associated with natural gas used as feedstock taken into account in assessment for EITE assistance
- Formal assessment of eligibility conducted in first half of 2009

Rates of assistance to EITE industries

- Two rates of assistance:

90% rate of assistance	Activities above 2000t/\$m revenue or 6000t/\$m value added
60% rate of assistance	Activities between 1000t/\$m-1999t/\$m revenue or 3000t/\$m-5999t/\$m value added

- Rates of assistance reduced by 1.3% per annum for EITE sector - 'carbon productivity contribution'
- Initially around 25% of total permits to be provided as EITE assistance (35% including agriculture)
- EITE assistance could reach 45% depending on growth in the sectors

Assistance to emissions-intensive, trade-exposed (EITE) industries

Green Paper

White Paper

Australian Government

Assistance to maintain incentives for emissions reductions

- Assistance designed to maximise incentives for EITE industries to adjust to a low-carbon economy, by
 - providing assistance using the same baselines for all entities, new and existing, conducting an activity
 - calculating baselines using historical emissions information – not updating these for reduction in emissions by a firm
 - ensuring all entities bear some carbon cost
 - reducing the rates of assistance over time to ensure EITE activities share in national emissions reductions

Australian Government

Withdrawal of assistance for EITE industries

- EITE assistance is transitional
- EITE assistance program will be reviewed at the five-year review or at an earlier date if directed by the Minister – e.g. if an international agreement was concluded
- The Government will withdraw assistance as comparable carbon constraints are introduced

Australian Government

CCAF - assistance to business, regions and workers

- Climate Change Action Fund \$2.15 billion over five years
 - Additional \$300 million in 2013-14 and 2014-15 for coal industry
- Four streams
 - Information to businesses and community service organisations
 - Rebates for low emission investments
 - Structural adjustment assistance
 - Assistance for high emission coal mines
 - Investing in abatement and assistance for costs

Australian Government

Electricity Sector Adjustment Scheme

- Assistance valued at around \$3.9 billion
- Assistance in the form of permits ensures assistance adjusts in line with impacts on asset values
- Assistance will be:
 - targeted to the most emissions-intensive generators
 - limited to existing coal-fired generators
- Review will assess any windfall gain risks
- Energy sector bodies have indicated the package significantly mitigates risks to energy security
 - 'Low risk of plant shutdown' AER
- Assistance is conditional on windfall gain assessment and remaining available if needed to maintain future energy supply

Australian Government

Fiscal balance

	2008-09 \$b	2009-10 \$b	2010-11 \$b	2011-12 \$b
Revenue from the issuing of permits	-	-	11.5	12.0
Households Assistance Measures				
Assistance for Low and Middle Income Households	-	-	-3.9	-6.0
Fuel Tax Adjustment	-	-	-2.4	-2.0
Industry Assistance Measures				
Assistance to Emissions Intensive Trade Exposed Industries	-	-	-2.9	-3.1
Assistance to Strongly Affected Industries	-	-	-0.7	-0.7
Climate Change Action Fund		-0.3	-0.7	-0.7
Transitional assistance to firms participating in the Greenhouse Gas Reduction Scheme (GGAS)	*	*	*	*
Net Impact of Revenue and Assistance Measures	-	-0.3	0.8	-0.5
